MANAGED DATA SOLUTIONS ANNOUNCES NEW OFFSITE DATA STORAGE, DISASTER RECOVERY SERVICES

FOR IMMEDIATE RELEASE

OKLAHOMA CITY, OKLAHOMA – August 1, 2002 – Managed Data Solutions (MDS), a premier web hosting, technology consulting, and solutions provider, announced today the availability of a complete range of data backup services, designed to eliminate the potential loss of critical information.

“Utilizing the latest backup and server technologies, as well as our proprietary data collection and retention software and methodologies, we are able to achieve unrivaled reliability, scalability, and data availability,” says MDS spokesman Bill Lindsey. “We are able to collect and protect mission critical data, as well as offer the ability to recovery from a complete system failure on a given server or workstation.”

“Our extremely fast and reliable Internet connections for offsite storage, coupled with our onsite Rhino Backup Storage Devices, allow us to provide short term backup, and long term disaster recovery solutions,” Lindsey continued.

Each storage and disaster recovery solution is custom tailored to the customer’s needs. Hardware and software based VPN solutions are available to add additional layers of security for the most sensitive information.

Managed Data Solutions, based in Oklahoma City, Oklahoma, is engaged in web hosting, technology, business, and process consulting, data backup and offsite storage, disaster recovery, and other Internet based services. The company provides a complete line of shared, dedicated, and co-location hosting, as well as online merchant and catalog shopping services. Primary data is housed in the MDS Network Operations Center, a secure, environmentally controlled, redundantly powered facility. Data backups are completed daily, stored on a 6.4 Terabyte digital tape library. A redundant DS-3 connection provides fast, reliable Internet access.
